

Support Line

By K.M. LEE

AFTER peaking at a near seven-year high of 97 sen last Thursday, Leader Universal slipped into consolidation mode on mild profit-taking activity. The moving average convergence/divergence indicator remains bullish but the stochastic is falling, implying prices may resume their recovery process once the present overbought condition is neutralised. Resistance is seen at RM1 mark, followed by RM1.20 while support is at 85 sen.
